

## O<sup>1</sup> EVOLUTION GLOW IN THE DARK

LIMITED EDITION 100 PIECES

***Innovative in terms of its design and technical particularities that provide it with its own DNA, it is unique and a FIRST in terms of its design.***

**Impassioned by this little jewel that offers many mechanical complications while allowing for perfect reading of the time within a magnificent case, you will discover a timepiece with a perfect balance between an avant-garde design and timekeeping nostalgia.**

**O<sup>1</sup> EVOLUTION** is a wristwatch providing a supplement of mysterious fashion, minimalist and with studied simplicity.

We present to you the first **EVOLUTION** of a Limited Series of **100** pieces of our first model **O<sup>1</sup>** color sphere, our challenge was to realize a new innovative dial by its totally phosphorescent material; a dial of a new design white the day and green phosphorescent in the dark.

**O<sup>1</sup> EVOLUTION** is transparent as crystal in order for its movement to be visible from every angle, and beyond that its inner workings, and glow in the dark a magnificent phosphorescent green dial of face as well as his profile, a watch that is both feminine and masculine, elegant yet sporty, ideal for wearing all circumstances and affordable to all.

**It is unique and a first in terms of its design**, since in order to successfully create a watch with such smooth edges, without ridges, thereby allowing light to penetrate perfectly, without obstacles and/or refraction, and also letting take out again the phosphorescent green luminosity of its dial in the dark, its case and crystal have been poured from a single piece.

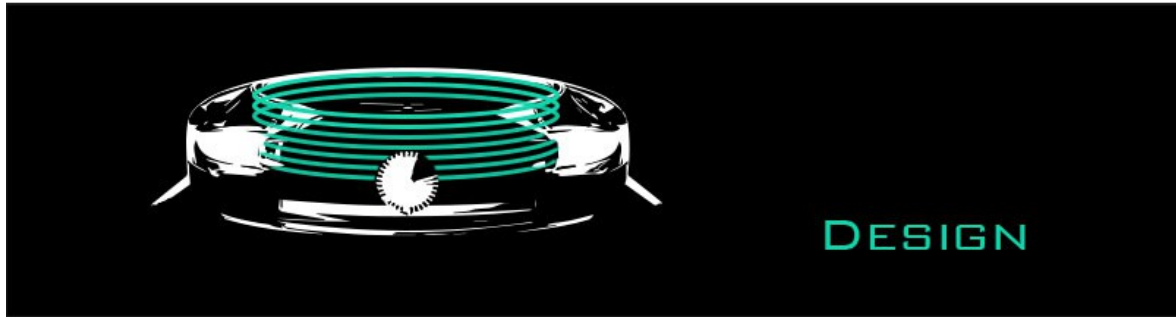

### A return of the Made in France watchmaker

**PROJECT O CONCEPT** wishes to reconnect with the expertise of French watchmaking and give a real artistic value to its achievements.

This watch is produced with French industrial partners that offer recognised know-how, except for the movement, with the bottom of the box being proudly engraved with the words Made in France, a country that can be proud of its long-standing contribution as the cradle of the development of timekeeping.

We work unceasingly in order to remain at the cutting edge of quality know-how, since our company – even though we will have to use industrial methods (necessary polymer treatment) – will remain small-scale and independent, manufacturing its creations with every attention to detail.

DESIGN

With design and technical requirements perfectly aligned, O<sup>1</sup> EVOLUTION offer you a supplement of mysterious fashion, minimalist and with studied simplicity.

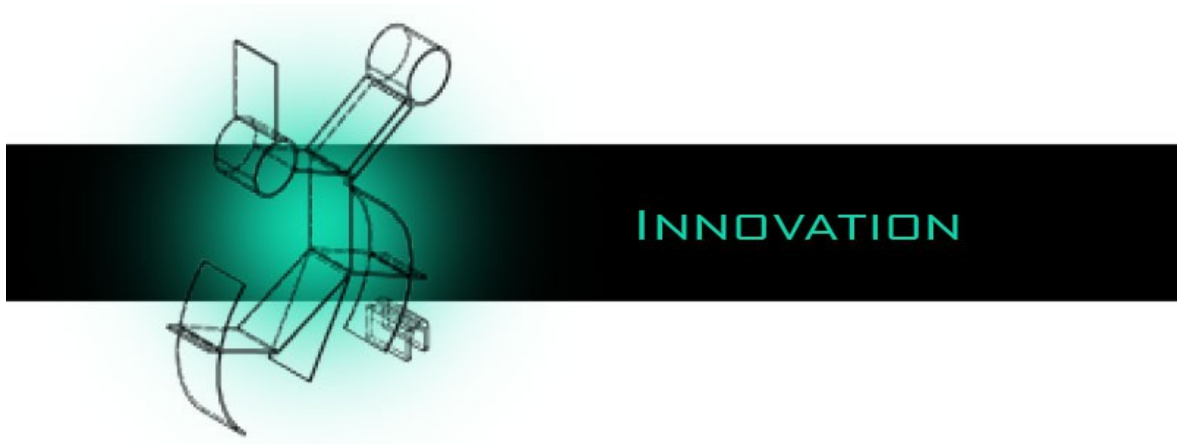

A mysterious roller with icy reflections, enveloping in its center a white dial becoming green phosphorescent in the dark and a skeletal automatic movement visible to the eye.

Its black crocodile band or rubber will provide the modern design of this watch with elegance when worn on the wrist, which is easily interchangeable, he is accompanied double folding clasp (stainless steel) with pushers.

**An innovative polymer design**, with all-new technical characteristics, made from a totally transparent, perfectly smooth and brilliant material, with a light transmission factor higher than that of glass (refraction index of 1.49), it is also lighter (density of 1.19 g/cm<sup>3</sup> versus 2.53 g/cm<sup>3</sup> for glass), resistant to scratches, UV rays and ageing (no yellowing), but also nearly 7 times as resistant as glass of equal thickness.

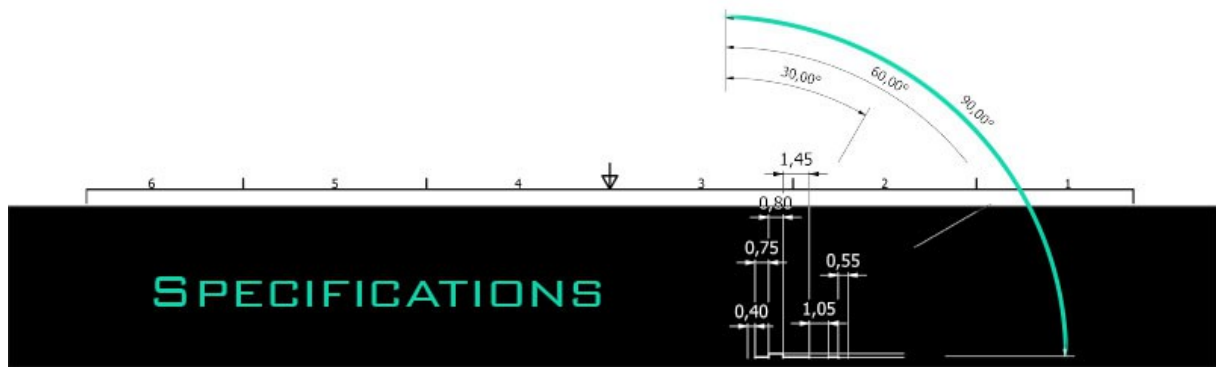

The case and its transparent polymer crystal are formed from a single piece (case / crystal), thereby offering a highly resistant yet ultra-light case, with a perfectly smooth structure, and with no edges of any kind, a first for a watch in this category.

Made of the same material, the back closes the case by pressure, leaving it sealed but with the movement and its rotor visible...

The movement's support and the dial have also been designed from a single piece of transparent polymer, of a worked aestheticism it is integrally phosphorescent, alloyed polymer in its mass with a phosphorescent pigment, white in the day and green phosphorescent in the black !!!

*Made in France and assembly by hand in our workshop.*

### Calibre

- Miyota 8N24-E21 skeleton
- Self-winding mechanical movement
- 11½” lines
- Diam. 26.00 mm / height 5.55 mm
- Vibrations 21.600 per hour
- Shock-absorber for balance staff
- 21 jewels

### Functions

- Hours / Minutes / Seconds

### Case - Glass

- Glass of acrylic synthesis
- Diam. 44.00mm
- Thickness 14.30mm

### Crown

- Crown screwdown, stainless steel

### Case-Back

- Glass of acrylic synthesis

### Water-Resistant

- 3 ATM

### Dial

- Polymer\* white / glow in the dark green

### Hands

- Hour / Minute : black and background luminova green
- Second : Baton

### Strap / Clasp

- Black crocodile grain or black rubber (style crocodile)
- Diam. 20/18 mm
- Double folding clasp with pushers (stainless steel)

### Weight

- Lightweight 22 g (without strap)

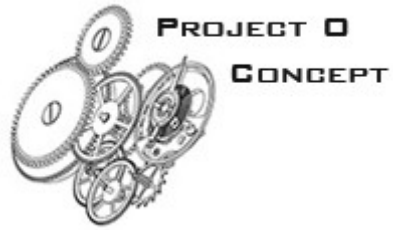

### Warranty

- Two (2) years

**Made in France**

\*Polymer alloy
